pewag skidder wheel track

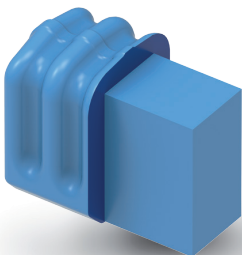

**STRONG
IS NOT
ENOUGH**
www.pewag.com

... your skidder will thank you!

Skidders are the ski racers of the forests: they are used in logging operations to remove cut trees as quickly and efficiently as possible from the cutting site, often having to make their way across rough terrain and coping with pronounced differences in altitude. To help them do their job properly, pewag has developed the single wheel track duro.

Suitable for skidders and universal use on all soil types

Prolonged lifespan thanks to pewag starwave® technology

- Broad contact surface prevents machines from sinking
- Optimal tire protection from tree stumps and stones thanks to wide coverage
- 4 horizontal welded-on starwave® stubs for more stability and even traction
